Substance Abuse Treatment for Veterans & Their Families

The Substance Abuse Treatment Team (S.A.T.T.) addresses the needs of veterans who have concerns about their use of substances such as alcohol, cocaine, marijuana, heroin, and amphetamines. SATT offers a variety of ways to help veterans understand this illness and help them live drug-free. The SATT team gears treatment to the individual veteran and works closely with the veteran on his or her own care plan.

We respect veterans' rights. If patients or family members have any concerns, questions or comments, please talk to a staff member or supervisor.

What do we do?

Our program is designed to meet the specific needs of each veteran. Treatment may include group therapy, addiction education, couples therapy, individual counseling, relapse prevention, and residential placement. Our focus is on education and rehabilitation for veterans. We try to involve family members and significant others for best results.

We have a legal track for those who have received a DUI or have legal issues that involve substance abuse/dependence. We have an Ambulatory Detoxification Program. This is an outpatient program to help veterans with substance abuse problems.

In our Residential Rehabilitation Program, veterans may stay up to 90 days. It has a strong emphasis on recovery. The program can also help veterans with job skills.

Who can enroll? How to enroll?

Any veteran eligible for care may enroll in the SATT program. We have three locations for

service. We will make every effort to enroll you in the location that best meets your needs.

1. If you have a primary care doctor/provider, ask them to send a consult to us.
2. Call our office (**1-800-324-8387 ext 6089**). We are open Monday through Friday from 8:00 am to 4:30 pm. If you must leave a message, we will return your call.

We will set up an appointment for you. Your general needs will be discussed (prescreening appointment). This is done in a group setting. We will then set you up with a second appointment. At this appointment we will look at your needs in detail. You will then be assigned to a Case Manager who will work with you to develop a plan for your recovery.
